

Advice on how to prepare for examinations to students

- Q1-Q30 (75marks, 2.5 marks each): **MCQ (Each with Only ONE answer)**
- Q31-32 (25marks): testing your knowledge & programming skills on data structures and related algorithms (Q style similar to what has been done in Assessment 1 or 2). There were past exam paper published for this type of exam questions.
- Time management is critical. Please gauge well the time spent in each question, best aligned to the weightage of each question.
